

Release notes

MWell 19.2.1.25128

26-06-2019

Limitation

MWE-449 The items under the *Results* menu are disabled if the dumpfile (*.wed) is not created with the current version of the program.

Fixed bugs

MWE-313 If a well is on a sheet pile you get a floating point division by zero.

MWE-421 Storativity calculation is wrong (Known Issue).

MWE-441 When a project is opened with an invalid contour plot view setting an error occurs.

Improvements

MWE-314 The calculation options Stehfest count, sheet piling implementation method (numerical or analytical) and segment length amplifier are now visible in the *Report*.

MWE-339 Storativity is now mentioned in the *Report*.

MWE-424 In the status panel of the contour plot the value of the contour can be seen for the location where the mouse is moved over.

MWE-442 When an error occurs in the calculation, the calculation is continued; a list of the failed calculation steps is shown at the end of the calculation (for both time history as contour calculation).
